

Novelty Of The Project

The following article provides the novelty of our project idea and the solution developed as part of our project work in the course Software engineering. Our project is developing a Dynamic WebSite for a Gym Managment that is accessible to users from both the computer over a Stable web connection. The project is designed for the people to who go to the gym frequently have a feature of Viewing the diet plan, work-out schedules, asking queries, request diet plans, workout schedules etc through a sophisticated look and user-friendly Web page.

To be frank, there are many web applications related to every need that are available online but, our Project has a user-friendly interface which is developed to ensure that users can access page features with ease and comfort.

In addition to all these features, Our project ensures that the Webpage is accessed through a well-defined control mechanism. This also ensures that only authorized users with their defined roles and access rights can use the administrative access features.
